SUMMARY

Software engineer with 7 years of experience building and scaling SaaS products. Frontend-leaning full stack developer with strong expertise in **JavaScript, TypeScript, React, and Go**, and a track record of delivering **high-impact features across the stack**. Experienced in driving projects from ambiguous requirements to production, collaborating across frontend, backend, and data teams to design scalable solutions. Proven ability to improve performance, accelerate delivery, and enable data-informed decision-making through experimentation and analytics.

EXPERIENCE

Madhive — Software Engineer

May 2022 – Present

- **Led design and development of an internal experiment management platform** enabling ~300 internal users (~20–30 active stakeholders) to configure and run A/B tests on ad campaign line items, reducing reliance on backend engineers and accelerating experiment turnaround
- Translated **ambiguous, evolving requirements** into actionable designs by driving cross-functional discussions; defined API contracts, validation logic, and frontend-backend integration strategy
- Architected and implemented a **React-based UI with complex form workflows**, layered validation, and client-side caching; enabled parallel development via API mocking and stubbing
- Partnered with backend engineers to **evolve data models and API behavior** for experiments, variants, and configurations across REST and gRPC services backed by Postgres
- Built **3 Looker/LookML dashboards** to surface experiment performance (*p-values, t-values, statistical significance*), improving visibility and enabling more informed decision-making
- Introduced **controlled experiment activation workflows** (via GitHub PR approvals) to mitigate risk for changes impacting live client campaigns
- **Reduced data export latency by ~90%** (>10s to ~1s) across multiple pages by optimizing large-scale data processing (~270K rows) and eliminating redundant object initialization
- Implemented **Playwright-based end-to-end testing framework**, reducing manual QA effort by ~83% and improving release confidence
- Expanded data ingestion capabilities by integrating **third-party data providers into GCP pipelines**, supporting reach calculation workflows for advertising segments
- Diagnosed and resolved **large-scale data update failures** in a Postgres system (~7M+ records) by implementing batched update workflows via scheduled queries, mitigating concurrency conflicts and cascading trigger issues
- **Mentored 2 engineers** in React, Go, and testing practices, improving onboarding speed and code quality
- Led cross-team initiative to **redesign key platform pages** over multiple quarters, coordinating frontend, backend, and design stakeholders

iCIMS — Software Engineer II

Feb 2021 – May 2022

- Implemented **JWT-based authentication flows** for an enterprise hiring platform, integrating secure session

handling across distributed services

- Developed **internal and external API integrations** to support enterprise-scale workflows, improving system interoperability
- Delivered **React/Redux features and internal tools** for a platform serving millions of users, contributing to core product functionality
- Provided **code reviews and onboarding support** for new engineers, improving team velocity and code quality

iCIMS — *Software Engineer I*

Jun 2019 – Feb 2021

- Built **reusable React component libraries** to accelerate frontend development across multiple product teams
- Conducted **security and accessibility testing** using tools such as Burp Suite, JMeter, and AXE, improving compliance and user trust

iCIMS — *Software Development Intern*

Jan 2019 – May 2019

- Debugged and stabilized **end-to-end automated tests** in a legacy codebase, improving CI/CD reliability

iCIMS — *Test Engineering Intern*

Jun 2018 – Aug 2018

- Developed **17+ reusable Java testing utilities** using BDD principles, accelerating QA workflows

WRKSHP Global — *QA Analyst Intern*

Jun 2016

- Performed device-based compatibility testing; identified and reported a critical scoring algorithm error.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Redux, HTML, CSS

Backend & Data: Go, SQL, Postgres, gRPC, REST APIs

Cloud & Infrastructure: GCP, AWS, Docker, CI/CD, Terraform

Testing: Playwright, Jest, Vitest, React Testing Library

Data & Analytics: BigQuery, Looker (LookML)

Tools & Practices: Git, Postman, Agile (Scrum/Kanban), AI-assisted development

EDUCATION

Rutgers University, School of Engineering — New Brunswick, NJ

B.S. in Computer Engineering | B.A. in Computer Science
